Surgical Draping Portfolio

HARTMANN

Foreword

Passion, Partnership and Professionalism: HARTMANN's strong set of values guarantees long-term sustainable product offerings. Together with you, we thrive on generating and implementing solutions that improve customer efficiency, as well as quality of life for millions of people in over 100 countries. We take what we do very seriously. We are experienced, skilled and never rest. After all, challenging the status quo can only be successful with mutual respect and confidence.

Hand in hand with our partners – from healthcare professionals, care-givers and pharmacists to distributors and patients – HARTMANN has been successfully shaping healthcare for over 200 impressive years.

Foliodrape® is a broad, single-use range of products that comes from a dependable supply source. By reducing complexity and achieving a brand position that is competitive, as well as ecological in the long term, HARTMANN continues to provide matching solutions for healthcare professionals. By doing so, we further our position as a driving force in the advancement of healthcare for patients around the operating theatre.

With our newly harmonized surgical drape portfolio, we are continuing to set standards while always keeping an eye on market needs.

Most Foliodrape® patient drapes and covers meet the highest demand level of EN 13795-1. They fully support patient and OR environment safety.

Thanks to their efficient handling ability to protect against pathogens and high absorption capacity, Foliodrape® products maximize safety and minimize health risks.

We are proud of our high performing products that we develop, produce and provide for our partners every day – which you will find in this catalogue.

HARTMANN Surgical Draping Portfolio – Even More

Going further to make procedures safe, efficient, and high performing – this is what Risk Prevention stands for.

It is our mission to provide medical solutions that protect surgical teams as well as patients, letting them and the hospital work more efficiently, simplify treatments and surgeries and reduce time-pressured errors. Our range of unique disposable surgical drapes offers a high degree of safety, supports effective infection control and, importantly, provides an economic alternative to reusable textile systems.

With the Medical Device Regulation (MDR) being effective from 2021 on, we performed a detailed review of our portfolio and re-invented the surgical draping portfolio by HARTMANN.

Within this process, we harmonized the portfolio to now offer over 500 surgical drapes, providing more options and matching solutions for our client's needs in the operating room. Our state-of-the-art sized drapes are not only ready for MDR, but also now come in more sustainable packaging by using less fresh cellulose fibers.

With the new portfolio, we also improved the quality of our surgical drapes: new product designs and innovative folding offer more convenience in the application process. Most of our improved surgical drapes impress with high performance according to EN 13795-1. The PE-film layer keeps patients and healthcare professionals safe thanks to their highly reliable fluid and bacteria barrier. Selected drapes with the improved viscose pad material ensure more than 60 % increased absorption quantity vs. our current SMS pad. With all these enhancements, our surgical drapes are more reliable and easy to use.

Reinventing the portfolio
The 7 Benefits

Harmonized portfolio with over 500 surgical drapes designed to provide matching solutions to your needs easily and fast.

Our viscose pad material is able to absorb up to 60 % more liquid than the actual one. This is especially relevant for "wet" surgeries like orthopedics.

Increased size to meet trends and optimize performance, for instance leggings, urology pouches and back table covers.

Optimized folding, for instance in gynecology and urology drapes, to increase efficiency of the application process – even by only one person.

We improved packaging design and material by using fewer cellulose fibers. This leads to more efficient sterilization and logistic processes.

Most Foliodrape® patient drapes and covers meet the highest demand level of EN 13795-1. They fully support patient and OR environment safety.

Our portfolio of surgical drapes will be ready for MDR, including all necessary documentation and certification requirements.

The Material

The Science Behind HARTMANN Surgical Draping Portfolio

Handling of surgical drapes must be fast, easy and efficient. They need to be a reliable partner in the OR and must be supportive in every single step, no matter how complicated the job is. It's our mission at HARTMANN to go further for health. We're always looking for the best materials, testing them, and combining them into a drape material that can stand the high requirements of an OR setting.

Our Protect drapes consist of at least one PE film layer which creates an impermeable coat to protect both healthcare professionals and patients from moisture and bacteria. The film layers are soft and light but still strong and tear-resistant.

The inner surface is bonding towards the polypropylene nonwoven layer on top of it, which consists of multiple thin layers, giving the drape the ability to absorb high amounts of liquid. On top of that the nonwoven material also provides mechanical strength with low abrasion and linting.

Foliodrape® consists of a variety of products made with different layers of hydrophilic non-woven material that quickly and easily absorb fluids over the whole surface.

Thanks to our in-house testing facilities as well as our external partner for third party controls and certification, we can ensure reliable material for our state-of-the-art products to fit your needs in the OR.

Protect Material

Our base Foliodrape® Protect consists of a layer of nonwoven material that quickly distributes and retains the fluid. These drapes can be used for OP's with little fluid volume and/or limited mechanical stress.

Protect Plus Extra Reinforced Material (with Viscose Pad)

Foliodrape® Protect Plus Extra Reinforced with Viscose Pad the pad material is up to 60 % more absorbent vs. the SMS pad and provides as well higher friction.

Protect Plus Material (with SMS Pad)

Foliodrape® Protect Plus with SMS Pad material offers even more functionality regarding safety and liquid management. It has a large, absorptive pad, and is appropriate for surgeries with high fluid volumes and/or high mechanical stress.

SMS Material

Foliodrape® SMS patient drapes and covers consist of different layers of hydrophobic nonwoven material. They are single-use sterile patient drapes and covers for short-term use and are appropriate to be used in procedures with low amount of fluid and where breathable material is required.

PE (Polyethylene film)

Foliodrape® PE drapes are made of a Polyethylene-film (PE). They are single-use sterile patient drapes and covers for short-term use for prevention of infection on humans in clinical environment. The polyethylene film (PE) acts as a fluid and bacteria barrier, even under pressure.

- High Absorption
- Impermeable
- Barrier for bacteria
- Tear-resistant
- Mechanical strength
- Low abrasion & linting

Between 2018 and 2019, Paul HARTMANN AG experts performed comparison tests with regard to previous product lines of Foliodrape®. The laboratory reviews and specifications of each product are available on request. Liquid absorptive capacity (LAC) measured according to ISO 9073-6:2000-12.

Medical advisors of Paul HARTMANN AG confirmed product improvements and usage benefits. Foliodrape® products are certified by TÜV Süd Germany CE 0123.

Single Drapes

Contents

Foliodrape® single drapes create a reliable sterile barrier against contamination. Depending on the drape, it consists of one layer (SMS or PE material), two layers (Protect material), or two layers plus pad (Protect Plus with SMS pad or Protect Plus with Viscose pad). PE, Protect, and Protect Plus drapes are impermeable to moisture and bacteria, abrasion-resistant, and low linting.

Accessories

Contents

Foliodrape® accessories are single-use products for short-term use for prevention of infection on humans in a clinical environment. Depending on the products, they may be used in different fields of applications/disciplines in operating theatres and all other surgical environments. They are placed on the market as single packed or in sterile surgical draping sets (medical device sets).

Sets

Contents

The Foliodrape® set contains all the items needed for draping the patient, like patient drapes, equipment covers, fixation materials, collections accessories and commodity products which are included into sterile packages. The aim of draping is to prevent the passage of pathogens between non-sterile and sterile areas. The Foliodrape® standard sets are intended to be used in different fields of applications/disciplines.
